

AI Governance Officer Ethics Statement & Commitment

Module 10H

Preamble

As I complete this certification, I commit to the ethical practice of AI governance. I recognise that AI is a socio-technical force that shapes lives, communities and futures. I accept the responsibility to act with integrity, courage and care in all AI governance work. This commitment is grounded in the GDPR's principles of lawfulness, fairness and transparency and the EU AI Act's requirements for human oversight and accountable deployment of AI systems.

I pledge to:

1. **Uphold the law.**
Align my work with the GDPR, the EU AI Act and other applicable regulations, ensuring lawful processing of personal data and adherence to AI system obligations (including documentation, transparency and human oversight for high-risk systems).
2. **Prioritise human dignity and rights.**
Ensure that AI systems respect privacy, fairness, non-discrimination and fundamental rights, consistent with international standards for trustworthy AI.
3. **Champion accountability and human oversight.**
Establish clear human-in-the-loop controls so impactful AI-supported decisions are reviewable and, where necessary, overridden by trained people to prevent harm.
4. **Promote fairness and inclusion.**
Actively identify and mitigate bias through testing, monitoring, and corrective measures so AI serves all members of our community equitably.
5. **Support transparency and clarity.**
Ensure that AI systems can be understood, explained, and questioned by those affected; provide plain-language notices about purpose, data use, limitations and avenues for human review.
6. **Foster continuous learning.**
Stay informed about evolving laws, standards, and best practices; share knowledge with colleagues and communities and build capacity across roles.
7. **Act independently and courageously.**
Place the public good first; be honest about system limitations and risks; and never sacrifice compliance or integrity for convenience or commercial gain.

8. **Protect against harm.**

Anticipate and reduce risks from unsafe design, poor documentation, “digital debt,” vendor dependency, or unchecked innovation by insisting on robustness, safety and responsible deployment.

9. **Collaborate openly.**

Engage peers, regulators, and affected communities to co-create governance that is trustworthy, resilient and aligned with democratic values.

Closing

I understand that as an AI Governance Officer, I am a steward of technologies that shape the future. I will use my knowledge, skills and judgment to ensure AI serves the public good and strengthens the values that underpin our shared societies.
